ANTHONY J. PICENTE JR.
COUNTY EXECUTIVE

Vaccine Preventable Disease- Hepatitis B Birth Dose

The Perinatal Hepatitis B Prevention Program follows children born to Mothers who are positive for Hepatitis B during their pregnancy and track that vaccination and post vaccination serology are completed to ensure immunity. Changes to the Hepatitis B vaccination schedule could impact these numbers in the future.

From 2017 to 2022 the birth dose rate for children weighing more than 2000 grams had held steady at 90% or higher. Rates in Oneida County started dipping below 90% in 2023. The purpose of this data is to establish a baseline to see if there is a shift one way or another in regard to Hepatitis B Birth dose vaccinations with the federal changes that have been made.

Hepatitis B Birth Dose Vaccination Rates			Oneida County Perinatal Hep B Prevention Program Cases
year	Oneida County	NYS (outside of NYC)	
2017	93%	84%	15
2018	90%	85%	17
2019	92%	87%	8
2020	90%	85%	13
2021	91%	83%	16
2022	90%	84%	8
2023	86%	84%	15
2024	86%	79%	12

Oneida County Community Health Assessment & Community Service Plan Community Health Improvement Plan 2025-2030

The Community Health Assessment Report is now available. Oneida County Health Department, Mohawk Valley Health System and Rome Health conducted a comprehensive review of the county's current health status and key health needs. This assessment helps identify priority health areas and provides a framework for health improvement.

The top areas of focus identified through the assessment are:

- Access to and use of prenatal care
- Stress and anxiety in adults
- Poverty

Many initiatives involve both providers and community agencies.
